Introduction and formulation of hypothesis

To be considered: Background information, declared research objective and hypothesis.

Materials and Methods

To be considered: legibility of methods applied, scientific and logistical merit of methods

Research results and discussion

To be considered: Clearly defined results, nature and legibility of figures/data tables, relevance of results to poster and stated research objectives, good use of statistical analysis

Conclusions and recommendations

To be considered: Clear and concise conclusions/recommendation, the use of presented data in establishing stated conclusions, relevance to stated research questions.

Overall impression

To be considered: Legibility and originality of poster, appropriate use of graphics and text, overall quality of research (originality, quality and scientific contribution)
